research in practice

Using evidence in practice

Thinking about what you do now, discuss the extent to which you currently use evidence in practice in terms of:

> What you do individually, in your teams and at an organisational level?

> What ideas you have i.e. what might you do more of, less of or do differently and how can the resources add value to this?

> What topics are key for you?

> What support might you need and where might this come from?

> What support can you offer and who to?

> What ideas do you have to build on this?

> Which resources might you use in relation to these?
